Wello	https://welloinc.com/	welloStationX is clinically tested and FDA Cleared as a Class II Medical Device	WelloStation X: Hands-Free Kiosk facial detection directs users to a distance (10") from the sensor for an unambiguous, repeatable, and automated temperature measurement. Confidential email is sent with a time and date stamped picture of the person to a designated staff member.	Available	welloSign Choices for Kiosk or Desktop
FLIR	www.flir.com	The IR200 has the CE mark for use in Europe. It does not have the FDA clearance. FLIR does have a couple of FLIR products, that have FDA approvals. EXX and T5XX series	Extech IR200 Non-Contact Forehead IR thermometer	Depending on technology, availability ranges from immediate to 10 weeks	This is a non-contact thermometer that is purposely designed for forehead temperature measurement with an accuracy spec of +/-0.5F (+/-0.3C). This spec is significantly more accurate (~8X better) than specs found on typical industrial non-contact thermometers.
MarineXchange (MXP Protect)	https://www.cruiseindustrynews.com/cruise-news/22903-marineexchange-enhances-enterprise-platform-with-mxp-protect-to-fight-covid-19.html		Advanced thermal scanner hardware with face recognition technology can be used in the terminal, at the security checkpoint, during check-in, at the gangway or at strategic locations around the ship. Data is continuously synchronized, and alerts are triggered. Those scanners will be fully integrated with the various MXP mobile applications and can also function in the terminal without ship Wi-Fi.	Available May 19th	MXP Mobile Security and Gangway App: Thermal scanner with facial recognition technology.
Vone	www.vonetec.com		>99% accuracy - >90% accuracy while wearing mask,		mobile, wall and ceiling mount models - Data can go directly into SeaCare and compliance reporting capable.
