\*(EDITED AND MODIFIED FOR CREW ON CRUISE SHIPS BY DR. TONY CIMINERO)

We all face trauma, adversity and other stresses. Here's a roadmap for adapting to life-changing situations, and emerging even stronger than before.

Imagine you're going to take a raft trip down a river. Along with slow water and shallows, your map shows that you will encounter unavoidable rapids and turns. How would you make sure you can safely cross the rough waters and handle any unexpected problems that come from the challenge?

Perhaps you would enlist the support of more experienced rafters as you plan your route or rely on the companionship of trusted friends along the way. Maybe you would pack an extra life jacket or consider using a stronger raft. With the right tools and supports in place, one thing is sure: You will not only make it through the challenges of your river adventure. You will also emerge a more confident and courageous rafter.

## What is resilience?

Life may not come with a map, but everyone will experience twists and turns, from everyday challenges to traumatic events with more lasting impact, like the death of a loved one, a life-altering accident or a serious illness. Each change affects people differently, bringing a unique flood of thoughts, strong emotions and uncertainty. Yet people generally adapt well over time to life-changing situations and stressful situations — in part thanks to resilience.

*Psychologists define resilience as the process of adapting well in the face of adversity, trauma, tragedy, threats or significant sources of stress — such as family and relationship problems, serious health problems, or workplace and financial stressors. As much as resilience involves "bouncing back" from these difficult experiences, it can also involve profound personal growth.*

***While these adverse events, much like rough river waters, are certainly painful and difficult, they don't have to determine the outcome of your life. There are many aspects of your life you can control, modify and grow with. That's the role of resilience.*** Becoming more resilient not only helps you get through difficult circumstances, it also empowers you to grow and even improve your life along the way.

## What resilience isn't

Being resilient doesn't mean that a person won't experience difficulty or distress. People who have suffered major adversity or trauma in their lives commonly experience emotional pain and stress. In fact, the road to resilience is likely to involve considerable emotional distress.

While certain factors might make some individuals more resilient than others, resilience isn't necessarily a personality trait that only some people possess. On the contrary, resilience involves behaviors, thoughts and actions that anyone can learn and develop. The ability to learn resilience is one reason research has shown that resilience is ordinary, not extraordinary. One example is the response of many Americans to the Sept. 11, 2001 terrorist attacks and individuals' efforts to rebuild their lives after tragedy. *(See iconic examples in Dr. Tony Ciminero's Prolog in the book [iCope: Building Resilience or in the blog section online at \[iCopeWithStress.com\]\(http://iCopeWithStress.com\)](#))*

Like building a muscle, increasing your resilience takes time and intentionality. Focusing on four core components — connection, wellness, healthy thinking and meaning — can empower you to withstand and learn from difficult and traumatic experiences. To increase your capacity for resilience to weather — and grow from — the difficulties, use these strategies.

## Build your connections

**Prioritize relationships.** Connecting with empathetic and understanding people can remind you that you're not alone in the midst of difficulties. Focus on finding trustworthy and compassionate individuals who validate your feelings, which will support the skill of resilience.

The pain of traumatic events can lead some people to isolate themselves, but it's important to accept help and support from those who care about you. Whether you go on a weekly date night with your spouse or plan a lunch or meals out with a friend, try to prioritize genuinely connecting with people who care about you.

**Join a group.** Along with one-on-one relationships, some people find that being active in civic groups, faith-based communities, or other local organizations provides social support and can help you reclaim hope. When you return home, research groups in your area that could offer you support and a sense of purpose or joy when you need it.

## Foster wellness

**Take care of your body.** Self-care may be a popular buzzword, but it's also a legitimate practice for mental health and building resilience. That's because stress is just as much physical as it is emotional. Promoting positive lifestyle factors like proper nutrition, ample sleep, hydration and regular exercise can strengthen your body to adapt to stress and reduce the toll of emotions like anxiety or depression.

**Practice mindfulness.** Mindful journaling, yoga, and other spiritual practices like prayer or meditation can also help people build connections and restore hope, which can prime them to

deal with situations that require resilience. When you journal, meditate, or pray, ruminate on positive aspects of your life and recall the things you're grateful for, even during personal trials.

(See [iCopeWithStress.com](http://iCopeWithStress.com) under "What We Can Do For You" for practice sessions on Mindfulness and Relaxation training)

**Avoid negative outlets.** It may be tempting to mask your pain with alcohol, drugs or other substances, but that's like putting a bandage on a deep wound. Focus instead on giving your body resources to manage stress, rather than seeking to eliminate the feeling of stress altogether.

## Find purpose

**Help others.** By simply helping to support a fellow crew member in their own time of need can sense of purpose, foster self-worth, connect with other people and tangibly help others, all of which can empower you to grow in resilience.

**Be proactive.** It's helpful to acknowledge and accept your emotions during hard times, but it's also important to help you foster self-discovery by asking yourself, "What can I do about a problem in my life?" If the problems seem too big to tackle, break them down into manageable pieces. Seek out feedback and help from others.

For example, if you are still on a ship waiting to get home, you will not be able to control how and when you get home. But you can spend an hour each day developing your top strengths or working on your plans for work or career when you do get home. Taking initiative and taking control of what you can control will remind you that you can muster motivation and purpose even during stressful periods of your life, increasing the likelihood that you'll rise up during painful times again.

**Move toward your goals.** Develop some realistic goals and do something regularly — even if it seems like a small accomplishment — that enables you to move toward the things you want to accomplish. Instead of focusing on tasks that seem unachievable, ask yourself, "What's one thing I know I can accomplish today that helps me move in the direction I want to go."

**Look for opportunities for self-discovery.** People often find that they have grown in some respect as a result of a struggle. For example, after a tragedy or hardship, people have reported better relationships and a greater sense of strength, even while feeling vulnerable. That can increase their sense of self-worth and heighten their appreciation for life. Write a journal of your thoughts, feelings, and goals for the future. Look forward, not in the "rear view mirror".

## Embrace healthy thoughts

**Keep things in perspective.** How you think can play a significant part in how you feel — and how resilient you are when faced with obstacles. Try to identify areas of irrational thinking, such as a tendency to catastrophize difficulties or assume the world is out to get you, and adopt a more balanced and realistic thinking pattern. For instance, if you feel overwhelmed by a challenge,

remind yourself that what happened to you isn't an indicator of how your future will go, and that **you are not helpless**. You may not be able to change a highly stressful event, but you can change how you interpret and respond to it.

**Accept change.** Accept that change is a part of life. Certain goals or ideals may no longer be attainable as a result of adverse situations in your life. Accepting circumstances that cannot be changed can help you focus on circumstances that you can alter.

**Maintain a hopeful outlook.** It's hard to be positive when life isn't going your way. An optimistic outlook empowers you to expect that good things will happen to you. Try visualizing what you want, rather than worrying about what you fear. Along the way, note any subtle ways in which you start to feel better as you deal with difficult situations.

**Learn from your past.** By looking back at who or what was helpful in previous times of distress, you may discover how you can respond effectively to new difficult situations. Remind yourself of where you've been able to find strength and ask yourself what you've learned from those experiences.

**Express gratitude.** In times of distress, our attention goes to what is wrong or missing in our current situation. Research from *positive psychology* shows that if we express gratitude for those things we do appreciate in life it helps us emotionally. Think of the people or things in life that you value and keep an ongoing list of those positive things in your life. Review your gratitude list over the days ahead. If there are people who do things to emotionally support you (family at home, friends on the ship, or friends from your past), let them know how much you appreciate them the next time you talk to them. Expressing gratitude improves your mood.

## Seeking help

Getting help when you need it is crucial in building your resilience.

For many people, using their own resources and the kinds of strategies listed above may be enough for building their resilience. But at times, an individual might get stuck or have difficulty making progress on the road to resilience. The important thing is to remember you're not alone on the journey. While you may not be able to control all of your circumstances, you can grow by focusing on the aspects of life's challenges you can manage with the support of loved ones and trusted professionals.

***If you are having trouble with anxiety, stress, or depression, please check in with the medical team or your local HR representative on the ship.***
